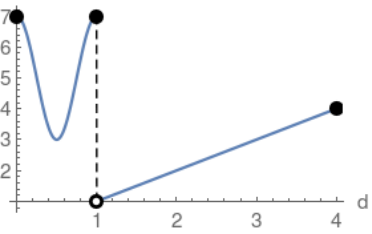
Piecewise Functions

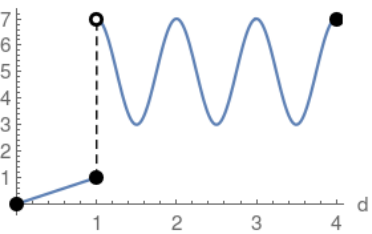
To define piecewise means that the function values and graphs are defined over a particular and generally limited section of the d-axis

$$\begin{cases} 2\cos(2\pi d) + 5 & 0 \le d \le 1 \\ d & 1 < d \le 4 \end{cases}$$



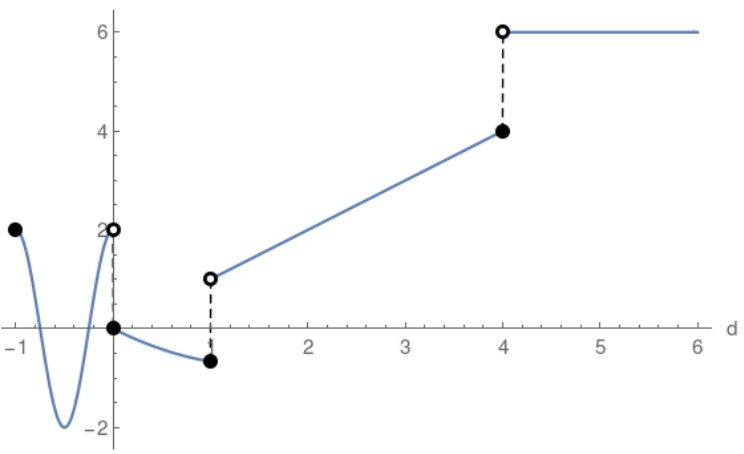
where two functions are placed together, and for that matter could be pieced differently i.e. swapped:

$$\begin{cases} d & 0 \le d \le 1 \\ 2\cos(2\pi d) + 5 & 1 < d \le 4 \end{cases}$$



More and more complicated functions could be placed together:

$$\begin{cases} 2\cos(2\pi d) & -1 \le d < 0 \\ \frac{d^2}{3} - d & 0 \le d \le 1 \\ d & 1 < d \le 4 \\ 6 & d > 4 \end{cases}$$



Solid disk refers to inclusion of the point or any of $\leqslant$ $\geqslant$ $=$ operators

●

Hollow disk refers to the exclusion or any of the $<$ $>$ operators
