5. Given t=x and z=2, which of the following is correct:

$t \times z = x^2$	$t - z = 0$
$t + z = 2x$	$\frac{t+z}{t-z} = -\frac{x+2}{2x}$

$\frac{t+z}{t-z} = \frac{2x}{x-2}$	$t - z = -2x$
$t \times z = -x^2$	$t + z = 0$

$\frac{t+z}{t-z} = \frac{x+2}{x-2}$	$t \times z = 2x$
$t + z = x + 2$	$t - z = x - 2$

$\frac{t+z}{t-z} = 0$	$t + z = 2 - x$
$t \times z = -2x$	$t - z = -x - 2$

Solution
