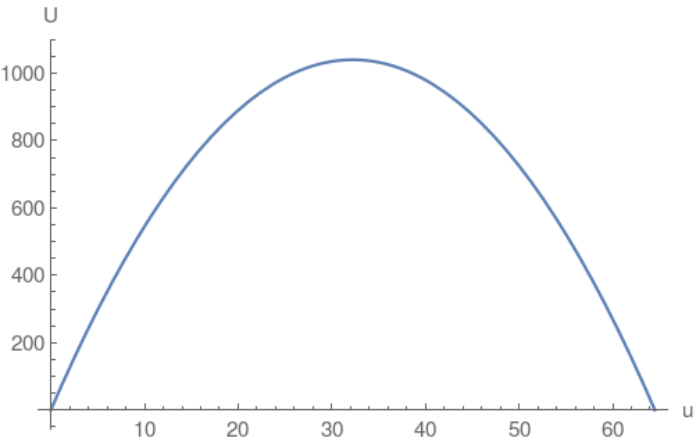
4.

4. Perimeter of rectangle $= 2(u+a) = 129$ where a is the length of the other edge of rectangle. Area of the rectangle is $= u \times a$.
Use perimeter equation
and solve for $a = \frac{129-2u}{2}$

Then reformulate the area $U = u \times a = \frac{129\,u}{2} - u^2$ which turns out to be a quadratic Parabola:



Compute the vertex $\frac{129}{4}$ and then plug the vertex into the area which will compute the maximum area.
