

### Example 3. Vertex equal to vertical intercept

Plot  $m(f) = f^2 + 40$

#### Step 1.

Compute vertex and plot single point:

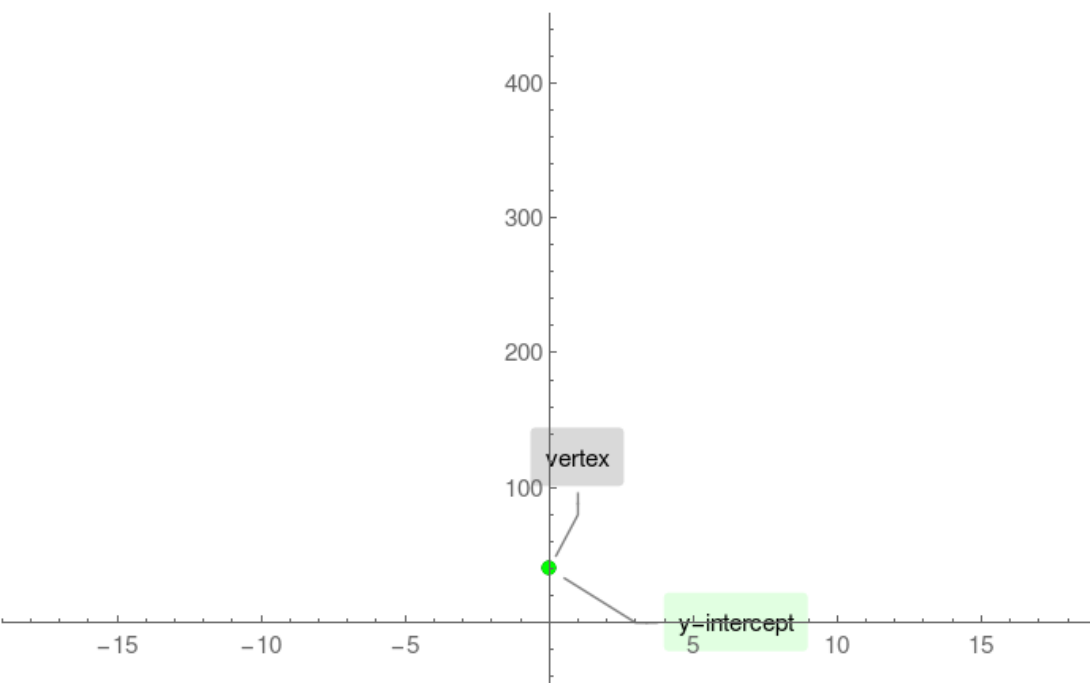

vertex = (0, 40)

#### Step 2.

Compute m-intercept and plot single point:

m-intercept = (0, 40)

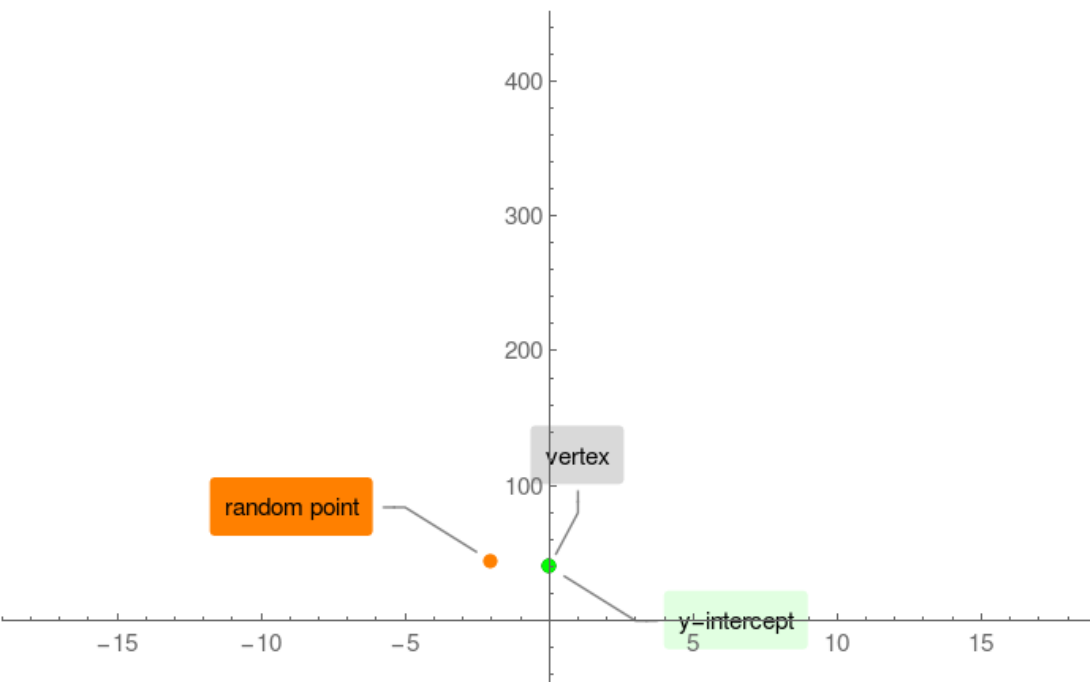

#### Step 3.

There are no f-intercepts!

Instead compute an arbitrary point on any side of vertex:

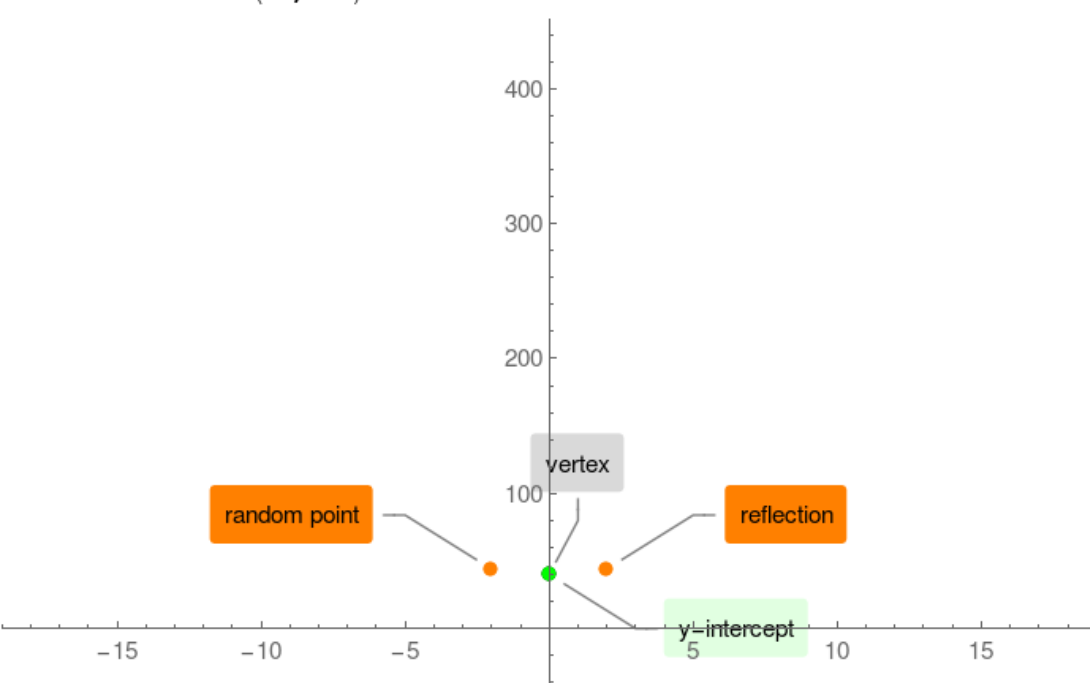

Random point = (-2, 44)

#### Step 4.

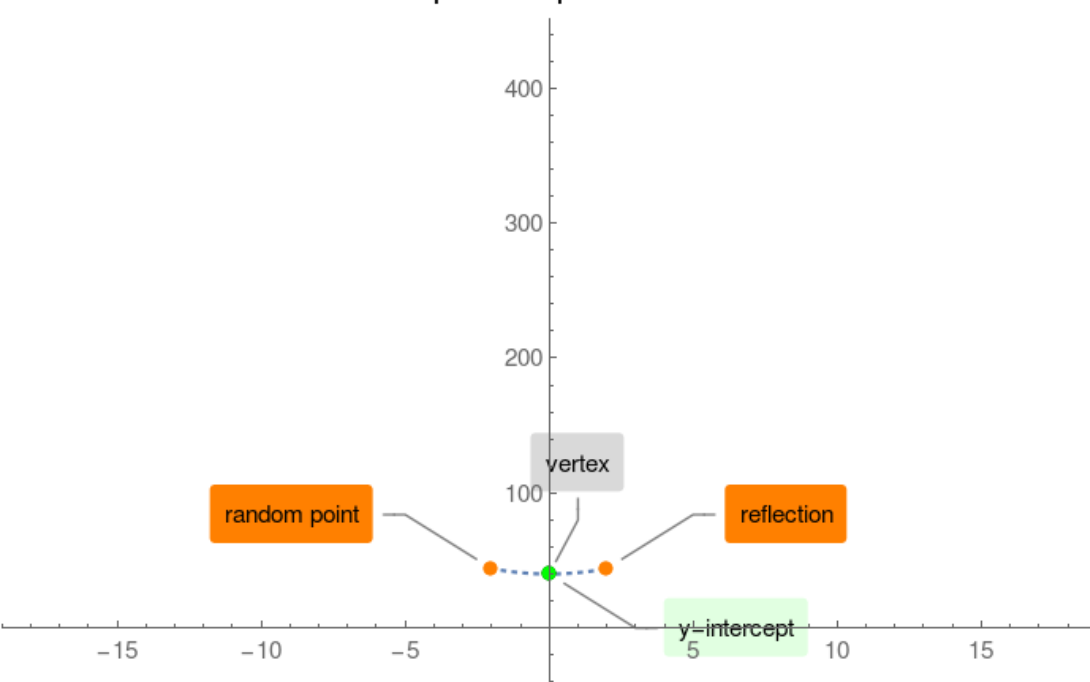

Reflect the point against the vertex's vertical axes:

Reflection = (2, 44)

#### Step 5.

connect the above computed points:

#### Step 6.

Extend the parabola beyond the range of intercepts
