

1.

The domain is all values that  $d$  is allowed to be.

Since I can't divide by zero (division by zero isn't allowed,  
I need to find all values of  $d$  that would cause division by zero.  
The domain will then be all other  $d$ -values.

When is this denominator equal to zero?

$$5d^4 + 9 = 0$$

impossible , then the domain of  $z$  is  $(-\infty, \infty)$  i.e.  $d \in \mathbb{R}$
