

Example 3. Vertex equal to vertical intercept

Plot $t(g) = g^2 + 40$

Step 1.

Compute vertex and plot single point:

vertex = (0, 40)

Step 2.

Compute t-intercept and plot single point:

t-intercept = (0, 40)

Step 3.

There are no g-intercepts!

Instead compute an arbitrary point on any side of vertex:

Random point = (-5, 65)

Step 4.

Reflect the point against the vertex's vertical axes:

Reflection = (5, 65)

Step 5.

connect the above computed points:

Step 6.

Extend the parabola beyond the range of intercepts
