

### Example 3. Vertex equal to vertical intercept

Plot  $j(f) = f^2 + 80$

#### Step 1.

Compute vertex and plot single point:

vertex = (0, 80)

#### Step 2.

Compute j-intercept and plot single point:

j-intercept = (0, 80)

#### Step 3.

There are no f-intercepts!

Instead compute an arbitrary point on any side of vertex:

Random point = (-5, 105)

#### Step 4.

Reflect the point against the vertex's vertical axes:

Reflection = (5, 105)

#### Step 5.

connect the above computed points:

#### Step 6.

Extend the parabola beyond the range of intercepts
