

Plotting the Parabola

How to plot : $q(z) = a z^2 + b z + c$

Step 1.

Examine the sign for the leading coefficient

If $a > 0$ then the valley shape:

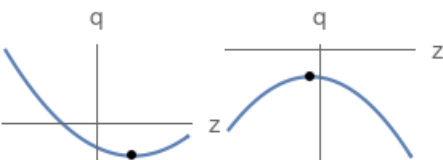

If $a < 0$ then the hill shape:

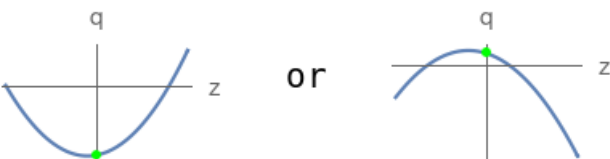

Step 2.

Compute the vertex: $(-\frac{b}{2a}, q(-\frac{b}{2a}))$

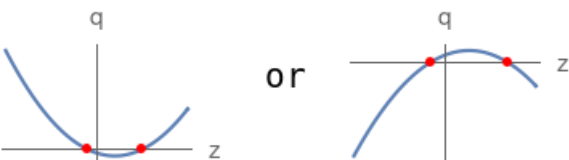

Step 3.

Compute the q-intercept by setting $z=0$, $0^2 a + 0 b + c = c$

Step 4.

Compute the z-intercepts by solving: $a z^2 + b z + c = 0$

Step 5.

Sketch a rough plot, try to connect vertex to intercepts:
