

### Example 3. Vertex equal to vertical intercept

Plot  $x(j) = j^2 + 160$

#### Step 1.

Compute vertex and plot single point:

vertex = (0, 160)

#### Step 2.

Compute x-intercept and plot single point:

x-intercept = (0, 160)

#### Step 3.

There are no j-intercepts:

Instead compute an arbitrary point on any side of vertex:

Random point = (-6, 196)

#### Step 4.

Reflect the point against the vertex's vertical axes:

Reflection = (6, 196)

#### Step 5.

connect the above computed points:

#### Step 6.

Extend the parabola beyond the range of intercepts
