

Example 2. No horizontal intercepts found

Plot $v(q) = -q^2 + 8q - 176$

Step 1.

Compute vertex and plot single point:

vertex = $(4, -160)$

Step 2.

Compute v-intercept and plot single point:

v-intercept = $(0, -176)$

Step 3.

Compute v-intercept reflected against vertex,

reflection = $(8, -176)$

Step 4.

connect the above computed points:

Step 5.

Extend the parabola beyond the range of intercepts
