

Vertex of the Quadratic

Given a quadratic $q(b) = a b^2 + b^2 + c$ compute its value at

$$b_1 = -\frac{b}{2a} \text{ namely } q(b_1) = c - \frac{b^2}{4a}$$

Now compute the same quadratic at b_1+h , namely

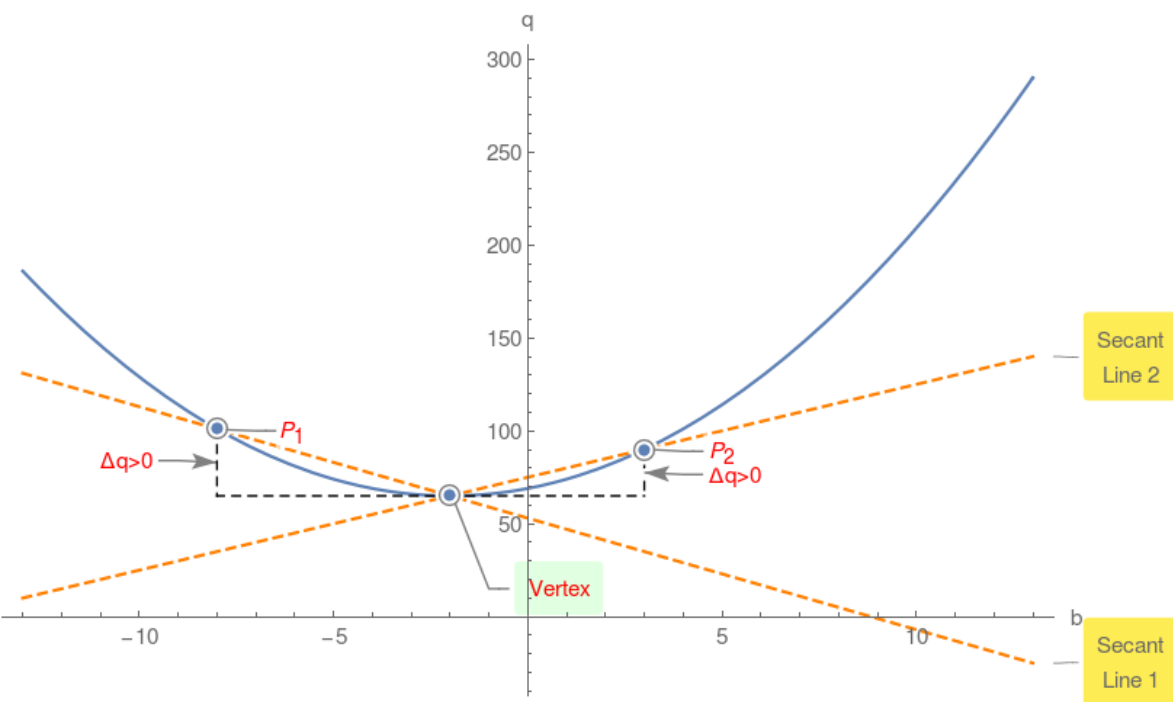

$$q(b_1+h) = -\frac{b^2}{4a} + a h^2 + c$$

$$\text{Compute } \Delta = q(b_1+h) - q(b_1) = a h^2$$

Since $h^2 > 0$, therefore if $a > 0$ then $\Delta > 0$ or vertex is the global minimum!

Example 1.

$$q(b) = b^2 + 4b + 69$$

However if $a < 0$ then $\Delta < 0$ or vertex is the global maximum!

Example 2.

$$q(b) = -4b^2 - 31$$
