

1. Which of the following are correct calculations for difference quotient of:

$$r(d) = 6d + 2$$

$$r(d) = 6d + 2$$

$$r(d+h) = 6(d+h) + 2$$

$$= 6d + 6h + 2$$

$$\frac{r(d+h) - r(d)}{h} = \frac{(6d+6h+2) - (6(d+1)+2)}{h}$$

$$= \frac{6h}{h}$$

$$= \frac{h(6)}{h}$$

$$= 6$$

$$r(d) = 6d + 2$$

$$r(d+h) = 6(d+h) + 2$$

$$= 6d + 6h + 8$$

$$\frac{r(d+h) - r(d)}{h} = \frac{(6d+6h+8) - (6d+2)}{h}$$

$$= \frac{6h}{h}$$

$$= \frac{h(6)}{h}$$

$$= 6$$

$$r(d) = 6d + 2$$

$$r(d+h) = 6(d+h) + 2$$

$$= 6d + 6h + 2$$

$$\frac{r(d+h) - r(d)}{h} = \frac{(6d+6h+2) - (6d+2)}{h}$$

$$= \frac{6h}{h}$$

$$= \frac{h(6)}{h}$$

$$= 6$$

$$r(d) = 6d + 2$$

$$r(d+h) = 6(d+h) + 2$$

$$= 6d + 6h - 4$$

$$\frac{r(d+h) - r(d)}{h} = \frac{(6d+6h+14) - (6d+2)}{h}$$

$$= \frac{6h}{h}$$

$$= \frac{h(6)}{h}$$

$$= 6$$

Solution
