

Example 1. 2 horizontal intercepts found

Plot $m(v) = -v^2 + 2v + 59$

Step 1.

Compute vertex and plot single point:

vertex = (1, 60)

Step 2.

Compute m-intercept and plot single point:

m-intercept = (0, 59)

Step 3.

Compute v-intercepts by solving $-v^2 + 2v + 59 = 0$:

$(1 - 2\sqrt{15}, 0)$, $(1 + 2\sqrt{15}, 0)$

Step 4.

connect the above computed points:

Step 5.

Extend the parabola beyond the range of intercepts
