

2. Given the graph of function z , which of the following choices is correct?

$z(2) = -6$	$z(7) = 0$	$z(-3) = -7$
z -intercept = $(0, 0)$	$z(0)$ is zero	$z(-2)$ is positive
domain of $z = [-3, 7]$	range of $z = [-15, 0]$	m -intercept = $(0, 0), (7, 0)$

m -intercept = $(0, 0), (7, 0)$	$z(4) = -15$	domain of $z = [-2, 8]$
$z(7)$ is positive	z -intercept = $(0, 0)$	$z(-3)$ is negative
range of $z = [-16, -1]$	$z(-2) = -6$	$z(0) = 0$

$z(0)$ is zero	$z(-3) = -7$	range of $z = [-15, 0]$
z -intercept = $(0, 0)$	$z(7) = 0$	$z(2)$ is negative
$z(-2) = -6$	m -intercept = $(0, 0), (7, 0)$	domain of $z = [-3, 7]$

$z(-3) = -8$	m -intercept = $(0, 0)$	$z(-2)$ is negative
$z(0) = 0$	range of $z = [-15, 0]$	$z(2) = -7$
z -intercept = $(0, 1)$	domain of $z = [-3, 7]$	$z(7)$ is zero

Solution
