

2.

2. Perimeter of rectangle = $2(h+a)=292$ where a is the length of the other edge of rectangle. Area of the rectangle is $= h \times a$.

Use perimeter equation

and solve for $a = \frac{292-2h}{2}$

Then reformulate the area $H = h \times a = 146h - h^2$ which turns out to be a quadratic Parabola:

Compute the vertex $\frac{292}{4}$ and then plug the vertex into the area which will compute the maximum area.
