

1.

1. (a) Basis for the Revenue model is a simple multiplication:

$$\text{Revenue} = \text{Price} \times \text{Quantity} = \left(-\frac{10}{9}r + 241\right) \times r = 241r - \frac{10}{9}r^2$$

Notice the latter is a quadratic:

(b) Domain starts at 0 CanadianDollars revenue up to r -intercept coordinate equal to twice the value of vertex of the Parabola:

$$\frac{2169}{10}$$

(d) The maximum occurs at the vertex r -intercept coordinate:

$$\frac{2169}{20}$$

or the amount 13068.2 CanadianDollars .
