

Piecewise Functions

To define piecewise means that the function values and graphs are defined over a particular and generally limited section of the g-axis

$$\begin{cases} 2 \sin(2 \pi g) + 5 & -5 < g \leq -3 \\ 4 - 3g & -3 < g \leq 4 \end{cases}$$

where two functions are juxtaposed together, and for that matter could be pieced differently i.e. swapped:

$$\begin{cases} 4 - 3g & -5 < g \leq -3 \\ 2 \sin(2 \pi g) + 5 & -3 < g \leq 4 \end{cases}$$

More and more complicated functions could be juxtaposed together:

$$\begin{cases} 4 - 3g & -7 < g \leq -5 \\ 2 \sin(2 \pi g) & -5 < g \leq -3 \\ \frac{g^2}{3} - g & -3 < g \leq 4 \\ 6 & g > 4 \end{cases}$$

Solid disk corresponds to inclusion of the point or any of $\leq \geq =$ operators

Hollow disk corresponds to the exclusion or any of the $< >$ operators
