

Example 3. Vertex equal to vertical intercept

Plot $s(p) = -p^2 - 40$

Step 1.

Compute vertex and plot single point:

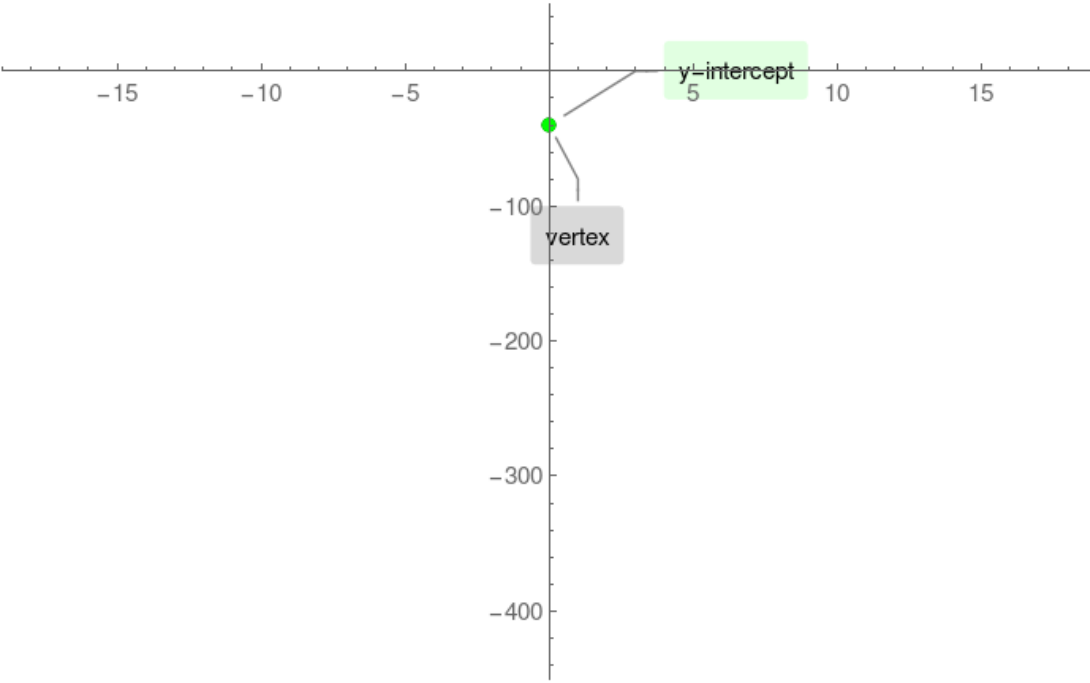

vertex = $(0, -40)$

Step 2.

Compute s-intercept and plot single point:

s-intercept = $(0, -40)$

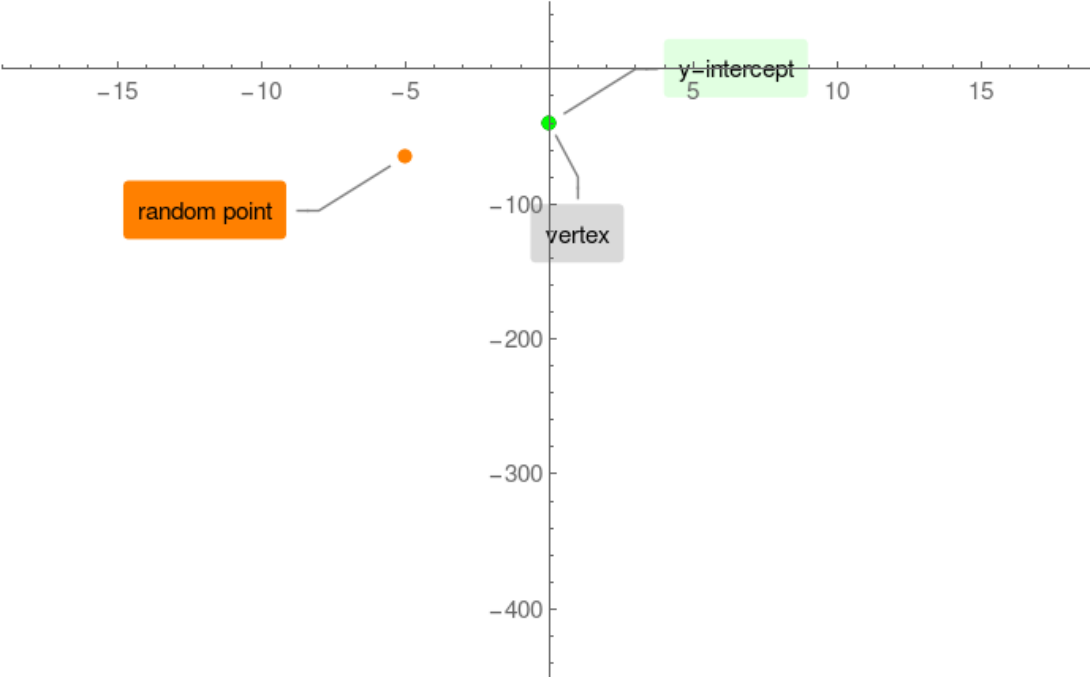

Step 3.

There are no p-intercepts!

Instead compute an arbitrary point on any side of vertex:

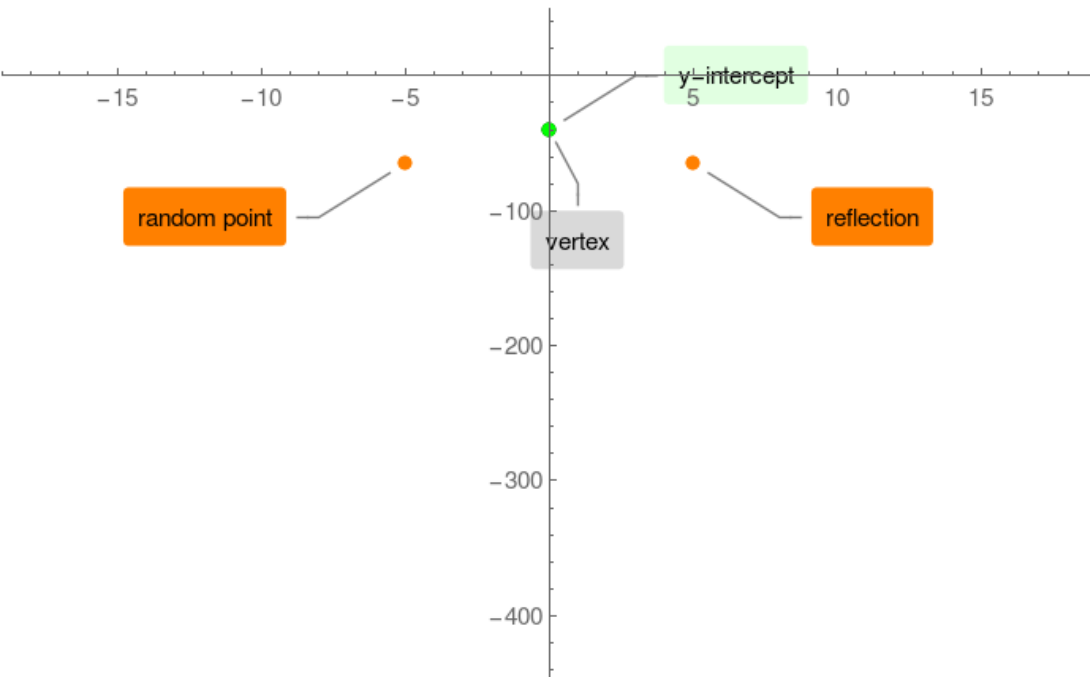

Random point = $(-5, -65)$

Step 4.

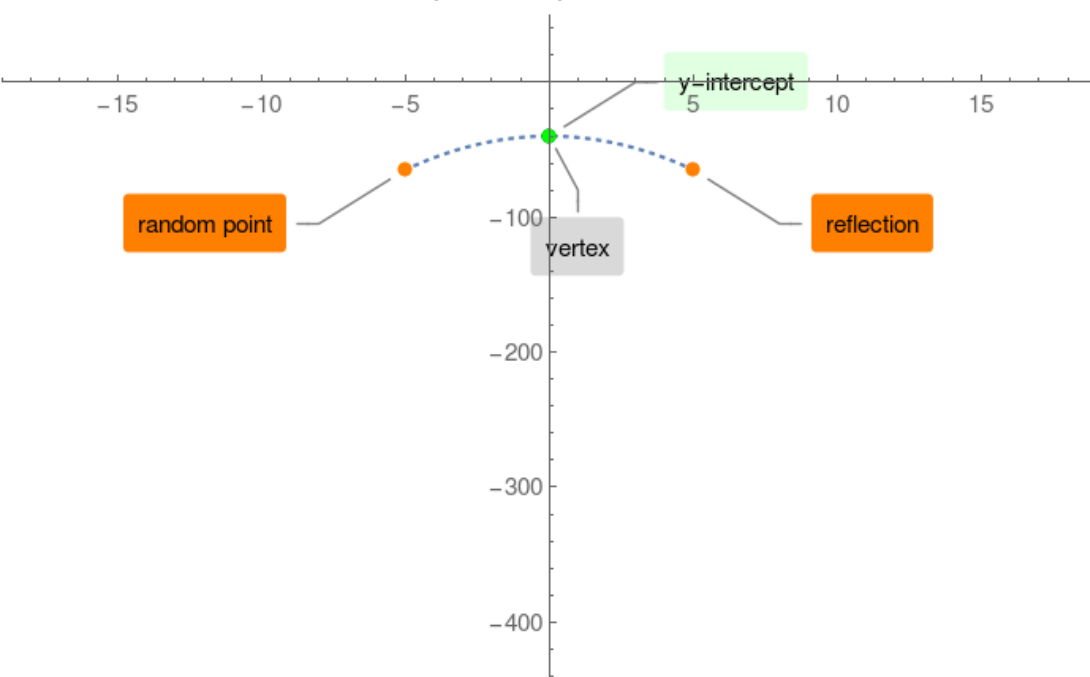

Reflect the point against the vertex's vertical axes:

Reflection = $(5, -65)$

Step 5.

connect the above computed points:

Step 6.

Extend the parabola beyond the range of intercepts
