

Piecewise Functions

To define piecewise means that the function values and graphs are defined over a particular and generally limited section of the r-axis

$$\begin{cases} 2 \sin(2 \pi r) + 5 & -6 \leq r \leq -2 \\ 2r + 1 & -2 < r \leq 0 \end{cases}$$

where two functions are glued together, and for that matter could be pieced differently i.e. swapped:

$$\begin{cases} 2r + 1 & -6 \leq r \leq -2 \\ 2 \sin(2 \pi r) + 5 & -2 < r \leq 0 \end{cases}$$

More and more complicated functions could be glued together:

$$\begin{cases} 2r + 1 & -7 < r < -6 \\ 2 \sin(2 \pi r) & -6 \leq r \leq -2 \\ \frac{r^2}{2} & -2 < r \leq 0 \\ 5 & r > 0 \end{cases}$$

Solid disk refers to inclusion of the point or any of $\leq \geq =$ operators

Hollow disk refers to the exclusion or any of the $< >$ operators
