

4. Given the graph of function t , which of the following choices is correct?

domain of $t = [-8, 4]$	$t(3)$ is negative	range of $t = [-18, 0]$
$t(4) = -7$	$t(-8) = 0$	e-intercept = $(-8, 0)$
t-intercept = $(0, -2)$	$t(-5) = -17$	$t(-2)$ is positive

$t(4)$ is negative	$t(0)$ is negative	domain of $t = [-7, 5]$
$t(-2) = -8$	t-intercept = $(0, -2)$	$t(3) = -6$
$t(-5) = -18$	e-intercept = $(-8, 0)$	range of $t = [-19, -1]$

$t(4) = -7$	$t(0) = -2$	$t(-2) = -8$
$t(3)$ is negative	domain of $t = [-8, 4]$	e-intercept = $(-8, 0)$
range of $t = [-18, 0]$	$t(-8)$ is zero	t-intercept = $(0, -2)$

$t(3) = -6$	$t(0) = -3$	$t(-8)$ is zero
$t(-5)$ is negative	$t(4) = -7$	t-intercept = $(0, -1)$
domain of $t = [-8, 4]$	e-intercept = $(-8, 0)$	range of $t = [-18, 0]$

Solution
