

Vertex of the Quadratic

Given a quadratic $g(d) = a d^2 + b d + c$ compute its value at

$$d_1 = -\frac{b}{2a} \text{ namely } g(d_1) = c - \frac{b^2}{4a}$$

Now compute the same quadratic at d_1+h , namely

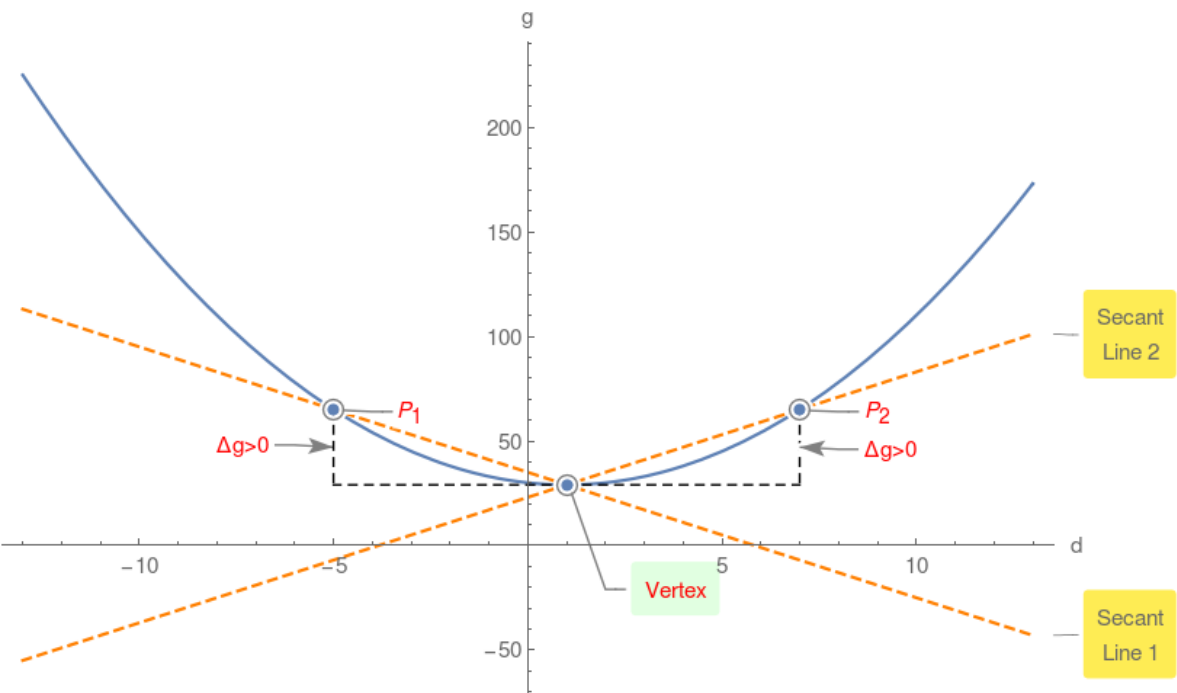

$$g(d_1+h) = -\frac{b^2}{4a} + a h^2 + c$$

$$\text{Compute } \Delta = g(d_1+h) - g(d_1) = a h^2$$

Since $h^2 > 0$, therefore if $a > 0$ then $\Delta > 0$ or vertex is the global minimum!

Example 1.

$$g(d) = d^2 - 2d + 30$$

However if $a < 0$ then $\Delta < 0$ or vertex is the global maximum!

Example 2.

$$g(d) = -3d^2 + 6d + 41$$
