

3.

The domain is all values that i is allowed to be.

Since I can't divide by zero (division by zero isn't allowed,
I need to find all values of i that would cause division by zero.
The domain will then be all other i -values.

When is this denominator equal to zero?

$$3i^4 + 1 = 0$$

impossible , then the domain of v is $(-\infty, \infty)$ i.e. $i \in \mathbb{R}$
