

Example 3. Vertex equal to vertical intercept

Plot $f(j) = -j^2 - 120$

Step 1.

Compute vertex and plot single point:

vertex = $(0, -120)$

Step 2.

Compute f-intercept and plot single point:

f-intercept = $(0, -120)$

Step 3.

There are no j-intercepts!

Instead compute an arbitrary point on any side of vertex:

Random point = $(-3, -129)$

Step 4.

Reflect the point against the vertex's vertical axes:

Reflection = $(3, -129)$

Step 5.

connect the above computed points:

Step 6.

Extend the parabola beyond the range of intercepts
