

4.

The domain is all values that v is allowed to be.

Since I can't divide by zero (division by zero isn't allowed,
I need to find all values of v that would cause division by zero.

The domain will then be all other v -values.

When is this denominator equal to zero?

$$v^2 - 27v + 50 = 0$$

$v = 2$ or 25 then the domain of q is $\{v \mid v \neq 2 \text{ or } 25\}$
