

3. Given  $h = -3 + 2x$  and  $y = -2$ , which of the following is correct:

$$h \times y = x(2x - 3) \quad h + y = 3(x - 1)$$

$$h - y = x - 3 \quad \frac{h+y}{h-y} = \frac{2x-5}{x+3}$$

$$\frac{h+y}{h-y} = \frac{3(x-1)}{2x-1} \quad h - y = x + 3$$

$$h + y = 3(x + 1) \quad h \times y = x(2x + 3)$$

$$h - y = 2x - 1 \quad h + y = 2x - 5$$

$$\frac{h+y}{h-y} = \frac{2x-5}{2x-1} \quad h \times y = -2(2x - 3)$$

$$h - y = 2x + 5 \quad h + y = 2x + 1$$

$$h \times y = -2(2x + 3) \quad \frac{h+y}{h-y} = \frac{3(x+1)}{2x-1}$$

**Solution**
