

4.

4. Perimeter of rectangle = $2(u+a)=305$ where a is the length of the other edge of rectangle. Area of the rectangle is $= u \times a$.

Use perimeter equation

and solve for $a = \frac{305-2u}{2}$

Then reformulate the area $U = u \times a = \frac{305u}{2} - u^2$ which turns out to be a quadratic Parabola:

Compute the vertex $\frac{305}{4}$ and then plug the vertex into the area which will compute the maximum area.
