

### Example 3. Vertex equal to vertical intercept

Plot  $f(j) = -j^2 - 160$

#### Step 1.

Compute vertex and plot single point:

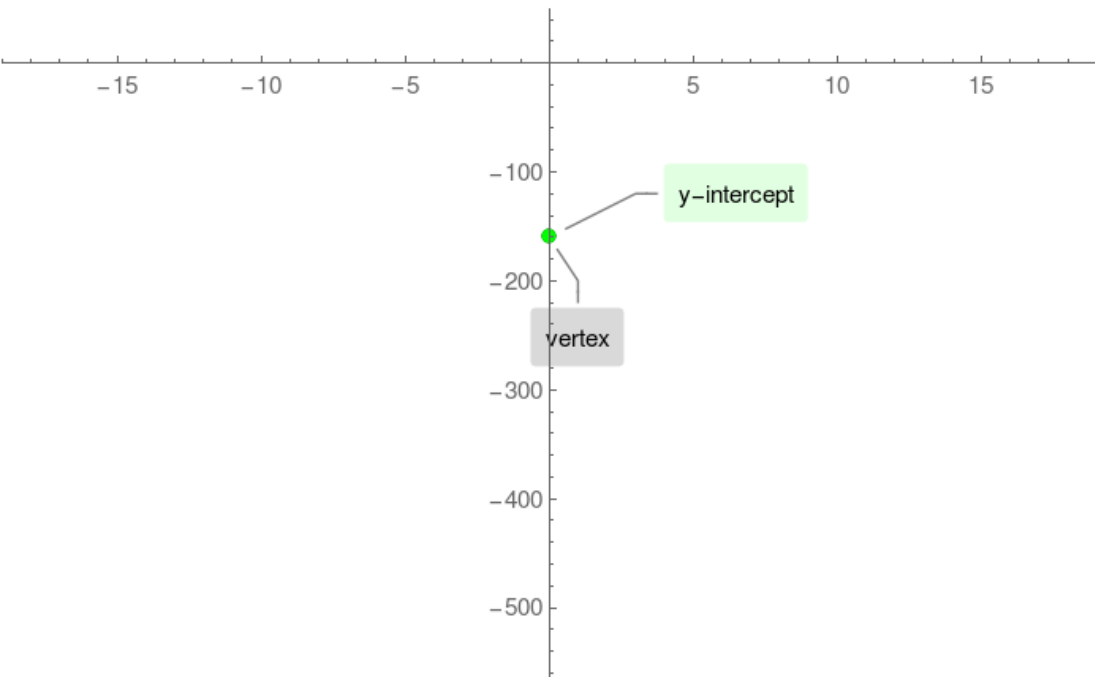

vertex =  $(0, -160)$

#### Step 2.

Compute f-intercept and plot single point:

f-intercept =  $(0, -160)$

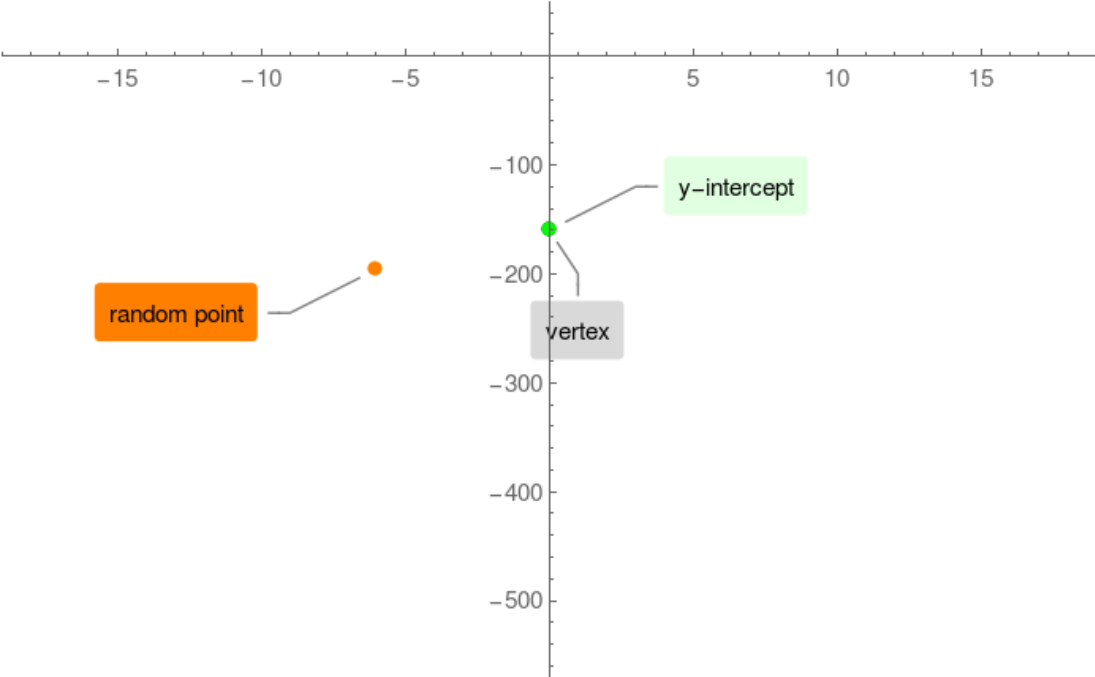

#### Step 3.

There are no j-intercepts!

Instead compute an arbitrary point on any side of vertex:

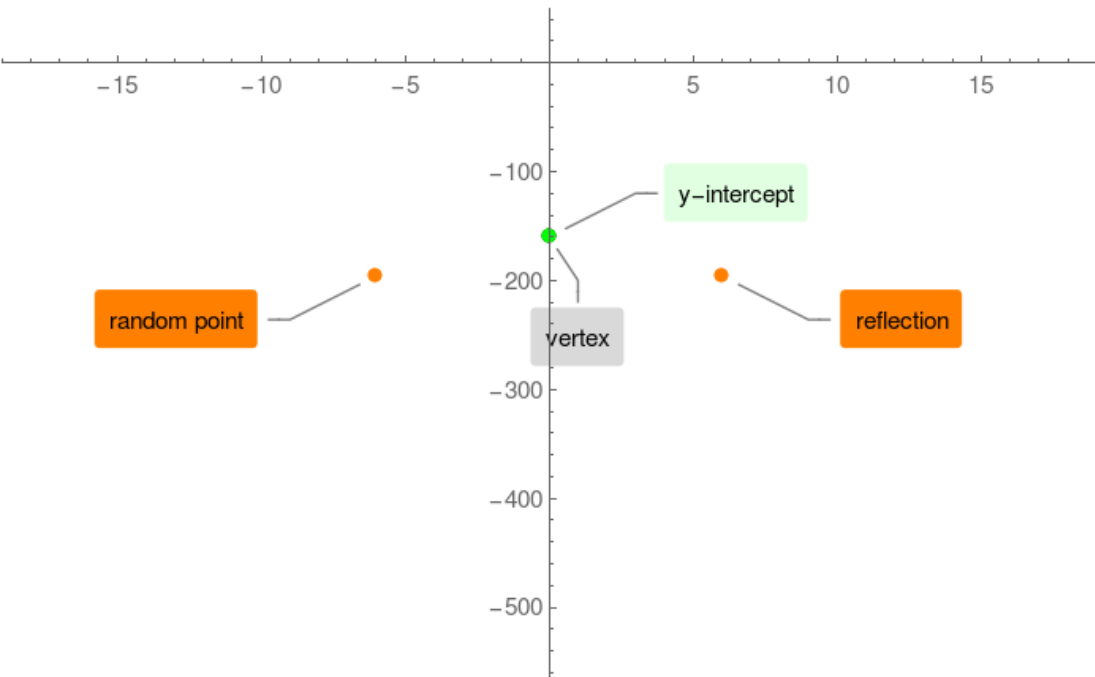

Random point =  $(-6, -196)$

#### Step 4.

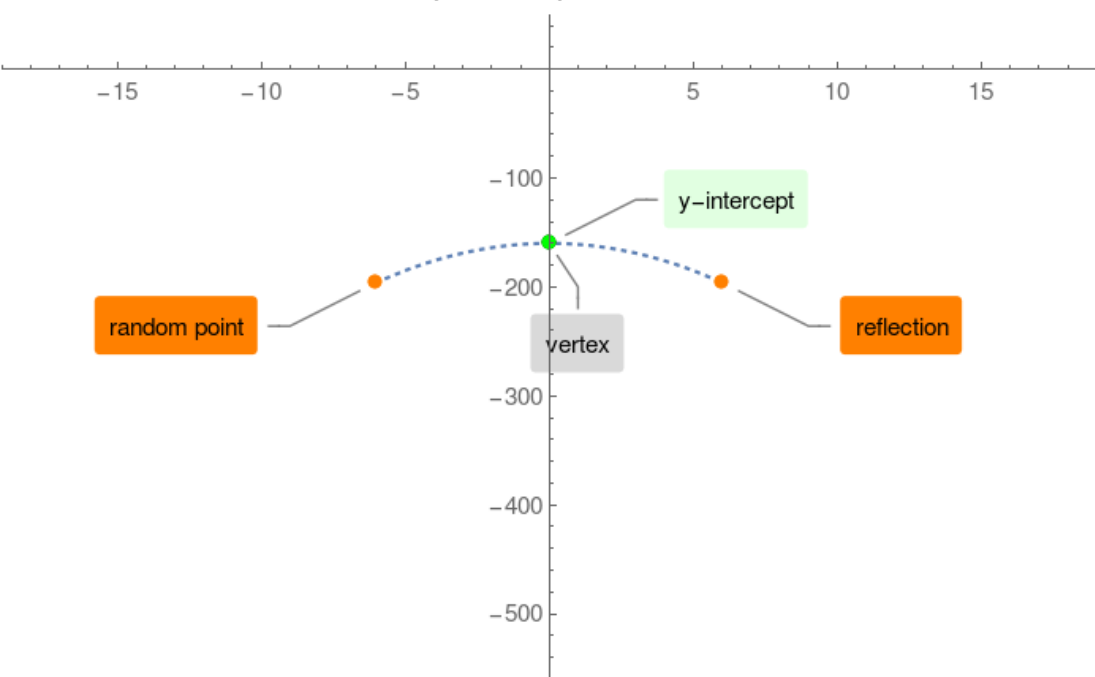

Reflect the point against the vertex's vertical axes:

Reflection =  $(6, -196)$

#### Step 5.

connect the above computed points:

#### Step 6.

Extend the parabola beyond the range of intercepts
