

2.

2. Perimeter of rectangle = $2(l+a)=191$ where a is the length of the other edge of rectangle. Area of the rectangle is $= l \times a$.

Use perimeter equation

and solve for $a = \frac{191-2l}{2}$

Then reformulate the area $L = l \times a = \frac{191l}{2} - l^2$ which turns out to be a quadratic Parabola:

Compute the vertex $\frac{191}{4}$ and then plug the vertex into the area which will compute the maximum area.
