

Example 1. 2 horizontal intercepts found

Plot $j(e) = -e^2 - 8e + 44$

Step 1.

Compute vertex and plot single point:

vertex = $(-4, 60)$

Step 2.

Compute j-intercept and plot single point:

j-intercept = $(0, 44)$

Step 3.

Compute e-intercepts by solving $-e^2 - 8e + 44 = 0$:

$(-4 - 2\sqrt{15}, 0)$, $(-4 + 2\sqrt{15}, 0)$

Step 4.

connect the above computed points:

Step 5.

Extend the parabola beyond the range of intercepts
