

2.

The domain is all values that v is allowed to be.

Since I can't divide by zero (division by zero isn't allowed,
I need to find all values of v that would cause division by zero.
The domain will then be all other v -values.

When is this denominator equal to zero?

$$2v^4 + 16 = 0$$

impossible , then the domain of w is $(-\infty, \infty)$ i.e. $v \in \mathbb{R}$
