

5.

The domain is all values that i is allowed to be.

Since I can't divide by zero (division by zero isn't allowed,
I need to find all values of i that would cause division by zero.

The domain will then be all other i -values.

When is this denominator equal to zero?

$$i^2 - 16 = 0$$

$i = \pm 4$ then the domain of m is $\{i \mid i \neq 4 \text{ or } -4\}$
