

1. Given the graph of function t , which of the following choices is correct?

$t(7)=0$	$t(2)=-6$	domain of $t=[-4,7]$
t -intercept = $(0,0)$	range of $t=[-12,0]$	$t(-3)=-4$
$t(4)$ is negative	$t(-4)$ is positive	u -intercept = $(0,0), (7,0)$

domain of $t=[-3,8]$	$t(0)=0$	$t(-4)=-6$
u -intercept = $(0,0), (7,0)$	$t(2)$ is negative	$t(-3)$ is negative
range of $t=[-13,-1]$	t -intercept = $(0,0)$	$t(7)=0$

$t(0)=0$	$t(2)=-6$	$t(4)$ is negative
u -intercept = $(0,0), (7,0)$	$t(-3)$ is negative	domain of $t=[-4,7]$
range of $t=[-12,0]$	t -intercept = $(0,0)$	$t(-4)=-6$

u -intercept = $(0,0)$	t -intercept = $(0,1)$	domain of $t=[-4,7]$
$t(7)=0$	$t(-4)=-6$	$t(4)=-13$
$t(0)$ is zero	range of $t=[-12,0]$	$t(-3)$ is negative

Solution
