

Rational Polynomials: Graphing and Asymptotes

Find the intercepts, if there are any.

Step 1: Set the numerator to 0 to solve for horizontal intercepts.

Step 2: Set the x to 0 to solve for vertical intercept.

Step 3: Set the denominator to 0 to solve for vertical asymptotes.

Step 4: Perform a long division to find the quotient which specifies the oblique asymptote.

Note: Blue curve the actual Rational function.
Red and Gold asymptotes.

Example: Horizontal Asymptote

$$\frac{5x-4}{x-2}$$

$$\begin{array}{r} + (5) \\ \hline x-2 \quad (5)x + (-4) \\ (5x) + (-10) \\ + (6) \end{array}$$

Example: Oblique Linear Asymptote

$$\frac{(x-2)x}{x-1}$$

$$\begin{array}{r} + (x) + (-1) \\ \hline x-1 \quad (1)x^2 + (-2)x \\ (x^2) + (-x) \\ + (-1)x \\ + (-x) + (1) \\ + (-1) \end{array}$$

Example: Multiple Vertical Asymptotes

$$\frac{x+2}{(x-2)(x+1)}$$

$$\begin{array}{r} + (0) \\ \hline (x) + (2) \end{array}$$
