

# Vertex of the Quadratic

Given a quadratic  $h(j) = aj^2 + bj + c$  compute its value at

$$j_1 = -\frac{b}{2a} \text{ namely } h(j_1) = c - \frac{b^2}{4a}$$

Now compute the same quadratic at  $j_1 + h$ , namely

$$h(j_1 + h) = -\frac{b^2}{4a} + ah^2 + c$$

$$\text{Compute } \Delta = h(j_1 + h) - h(j_1) = ah^2$$

Since  $h^2 > 0$ , therefore if  $a > 0$  then  $\Delta > 0$  or vertex is the global minimum!

## Example 1.

$$h(j) = j^2 + 4j - 67$$

However if  $a < 0$  then  $\Delta < 0$  or vertex is the global maximum!

## Example 2.

$$h(j) = -j^2 + 4j - 32$$
