

Example 3. Vertex equal to vertical intercept

Plot $e(f) = f^2 + 40$

Step 1.

Compute vertex and plot single point:

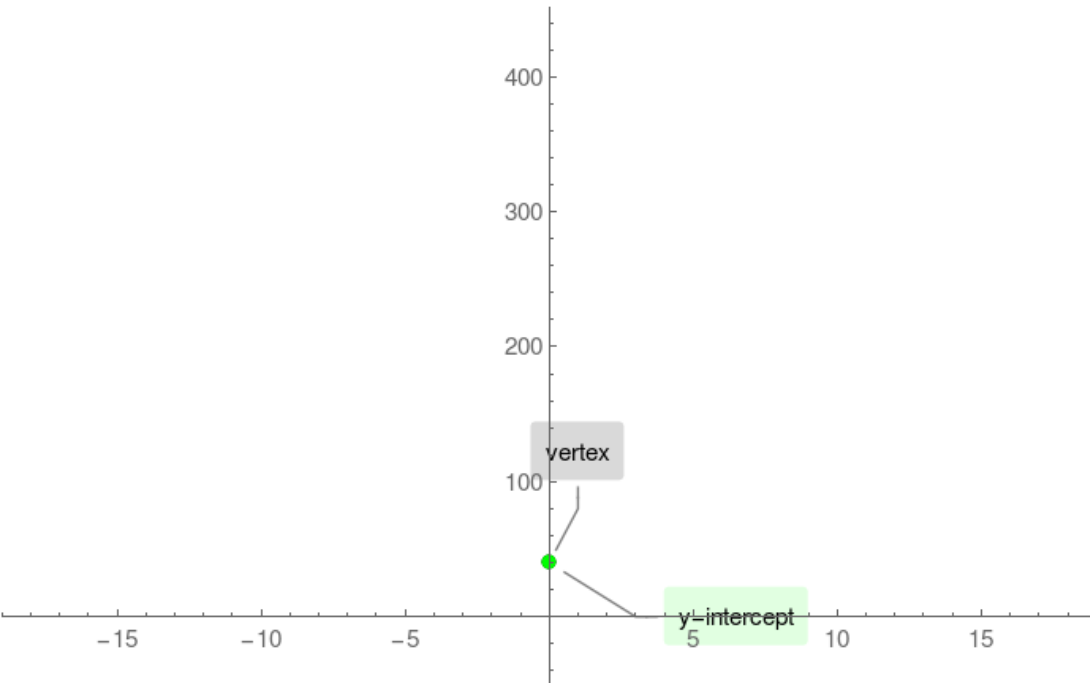

vertex = (0, 40)

Step 2.

Compute e-intercept and plot single point:

e-intercept = (0, 40)

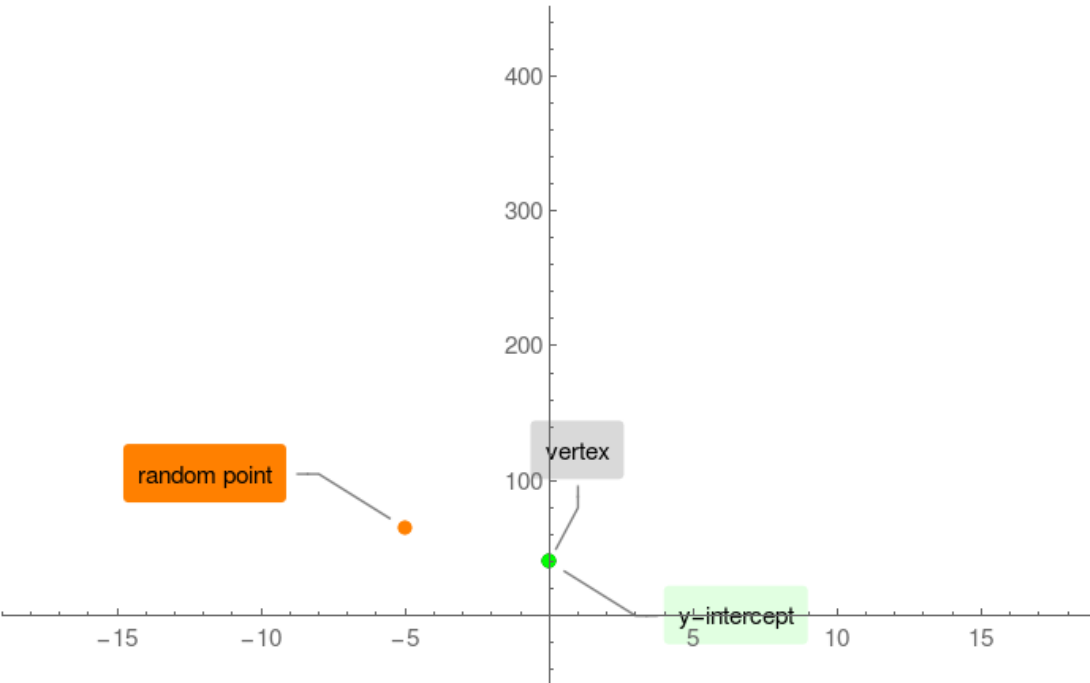

Step 3.

There are no f-intercepts!

Instead compute an arbitrary point on any side of vertex:

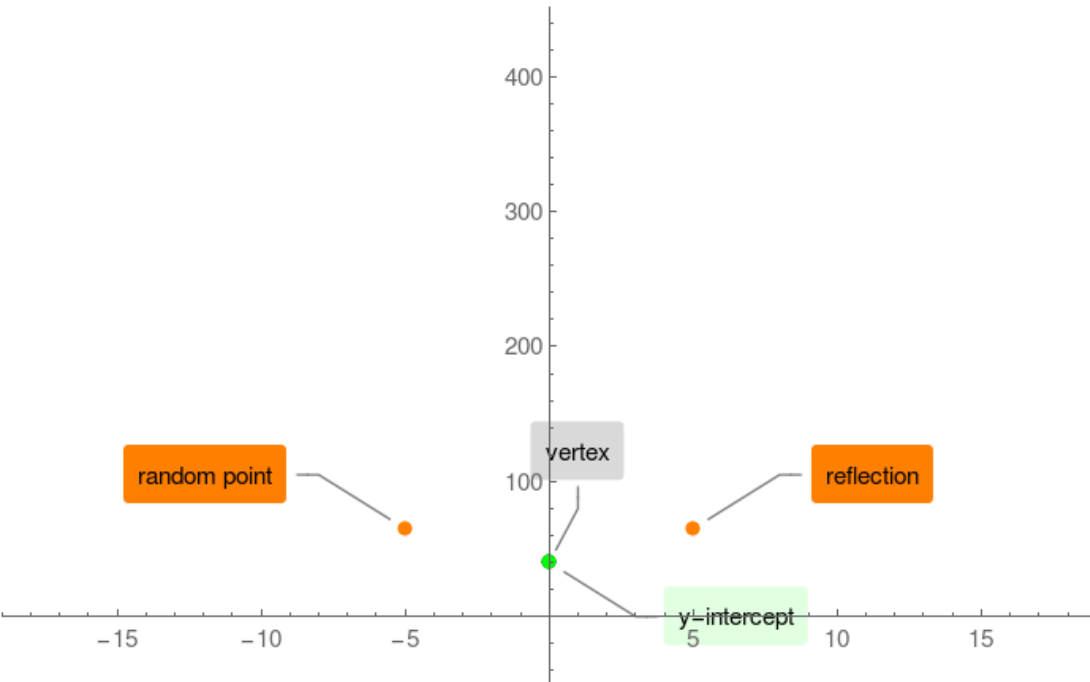

Random point = (-5, 65)

Step 4.

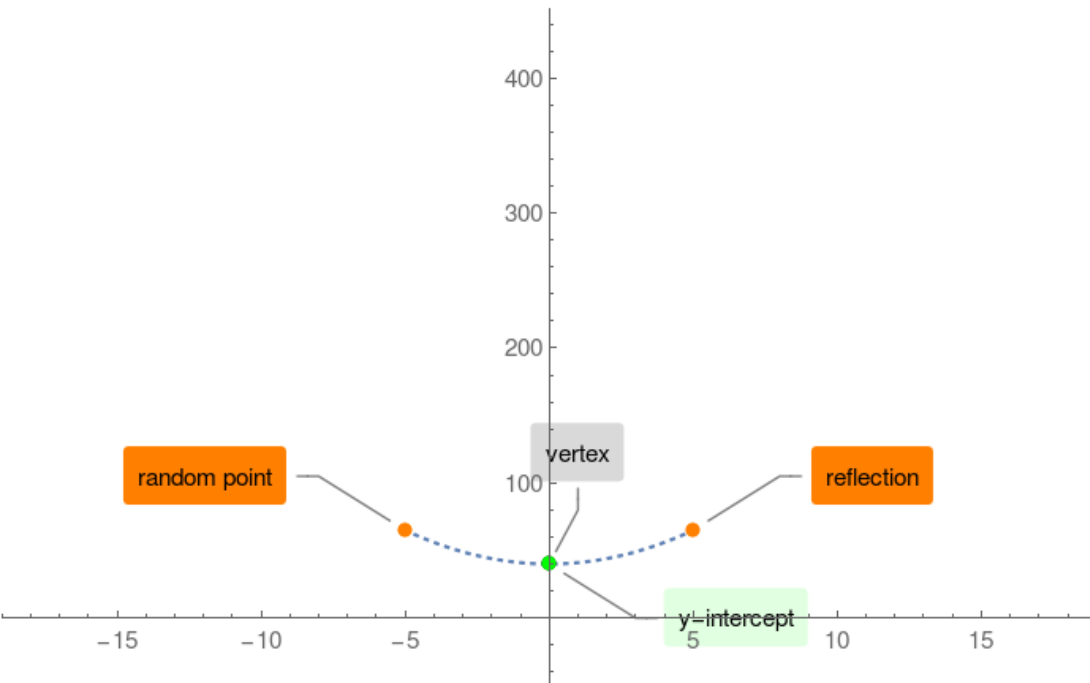

Reflect the point against the vertex's vertical axes:

Reflection = (5, 65)

Step 5.

connect the above computed points:

Step 6.

Extend the parabola beyond the range of intercepts
