

# Plotting the Parabola

How to plot :  $t(x) = ax^2 + bx + c$

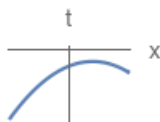

## Step 1.

Examine the sign for the leading coefficient

If  $a > 0$  then the valley shape:

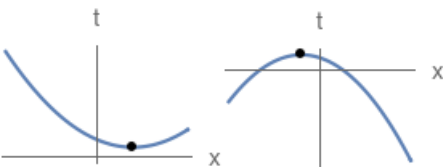

If  $a < 0$  then the hill shape:

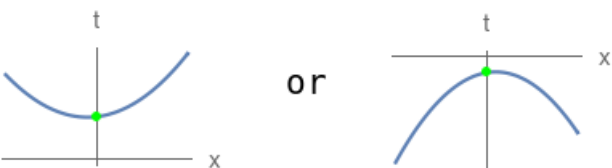

## Step 2.

Compute the vertex:  $(-\frac{b}{2a}, t(-\frac{b}{2a}))$

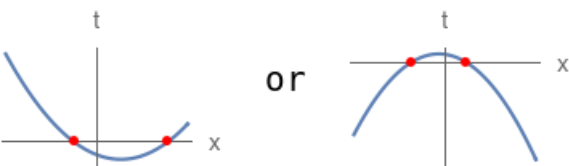

## Step 3.

Compute the t-intercept by setting  $x=0$ ,  $0^2a + 0b + c = c$

## Step 4.

Compute the x-intercepts by solving:  $ax^2 + bx + c = 0$

## Step 5.

Sketch a rough plot, try to connect vertex to intercepts:
