

2.

2. Perimeter of rectangle = $2(e+a)=410$ where a is the length of the other edge of rectangle. Area of the rectangle is = $e \times a$.

Use perimeter equation

and solve for $a = \frac{410-2e}{2}$

Then reformulate the area $E = e \times a = 205e - e^2$ which turns out to be a quadratic Parabola:

Compute the vertex $\frac{410}{4}$ and then plug the vertex into the area which will compute the maximum area.
