

Example 3. Vertex equal to vertical intercept

Plot $r(d) = d^2 + 120$

Step 1.

Compute vertex and plot single point:

vertex = (0, 120)

Step 2.

Compute r-intercept and plot single point:

r-intercept = (0, 120)

Step 3.

There are no d-intercepts:

Instead compute an arbitrary point on any side of vertex:

Random point = (-4, 136)

Step 4.

Reflect the point against the vertex's vertical axes:

Reflection = (4, 136)

Step 5.

connect the above computed points:

Step 6.

Extend the parabola beyond the range of intercepts
