

Vertex of the Quadratic

Given a quadratic $m(t) = at^2 + bt + c$ compute its value at

$$t_1 = -\frac{b}{2a} \text{ namely } m(t_1) = c - \frac{b^2}{4a}$$

Now compute the same quadratic at t_1+h , namely

$$m(t_1+h) = -\frac{b^2}{4a} + ah^2 + c$$

$$\text{Compute } \Delta = m(t_1+h) - m(t_1) = ah^2$$

Since $h^2 > 0$, therefore if $a > 0$ then $\Delta > 0$ or vertex is the global minimum!

Example 1.

$$m(t) = 2t^2 + 12t - 37$$

However if $a < 0$ then $\Delta < 0$ or vertex is the global maximum!

Example 2.

$$m(t) = -2t^2 - 4t + 46$$
