

Example 3. Vertex equal to vertical intercept

Plot $r(y) = -y^2 - 80$

Step 1.

Compute vertex and plot single point:

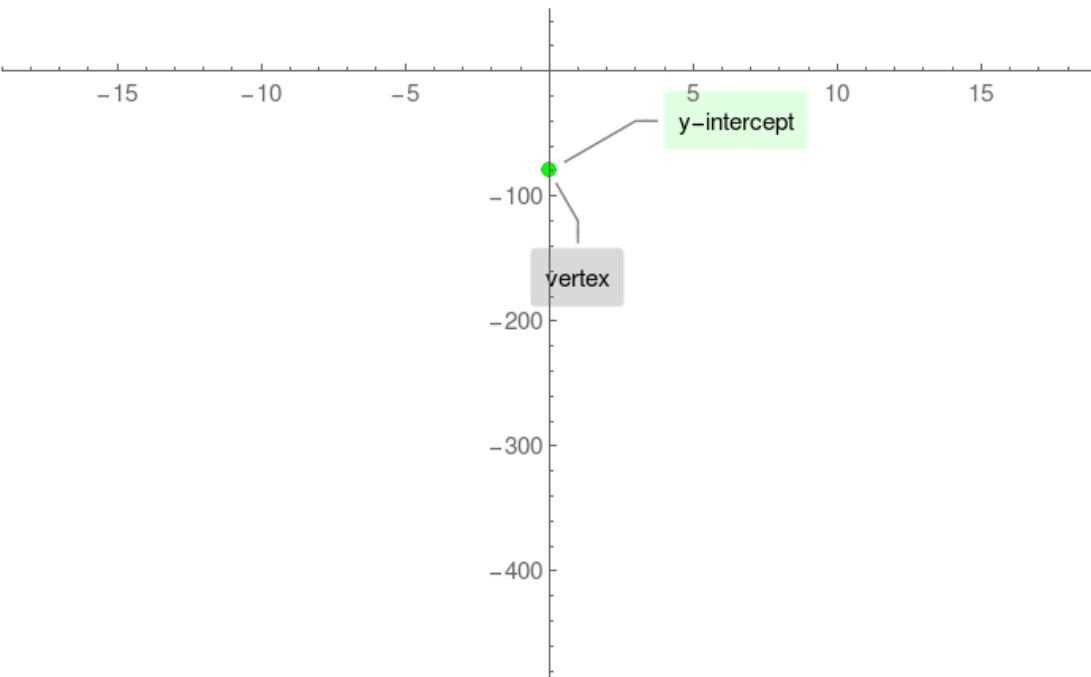

vertex = $(0, -80)$

Step 2.

Compute r-intercept and plot single point:

r-intercept = $(0, -80)$

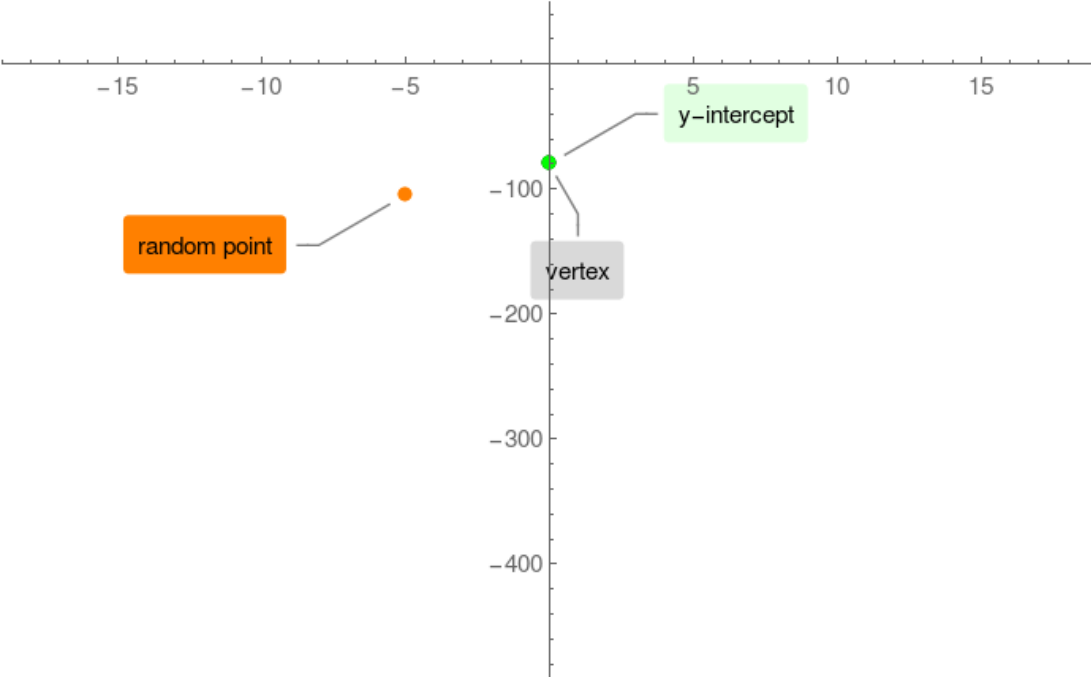

Step 3.

There are no y-intercepts!

Instead compute an arbitrary point on any side of vertex:

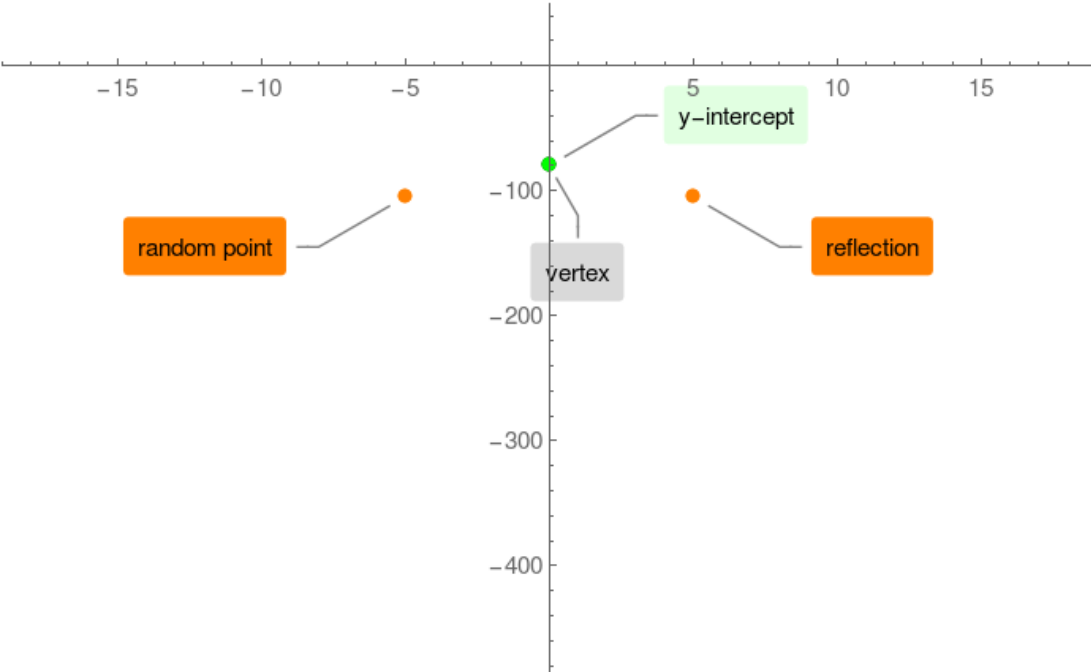

Random point = $(-5, -105)$

Step 4.

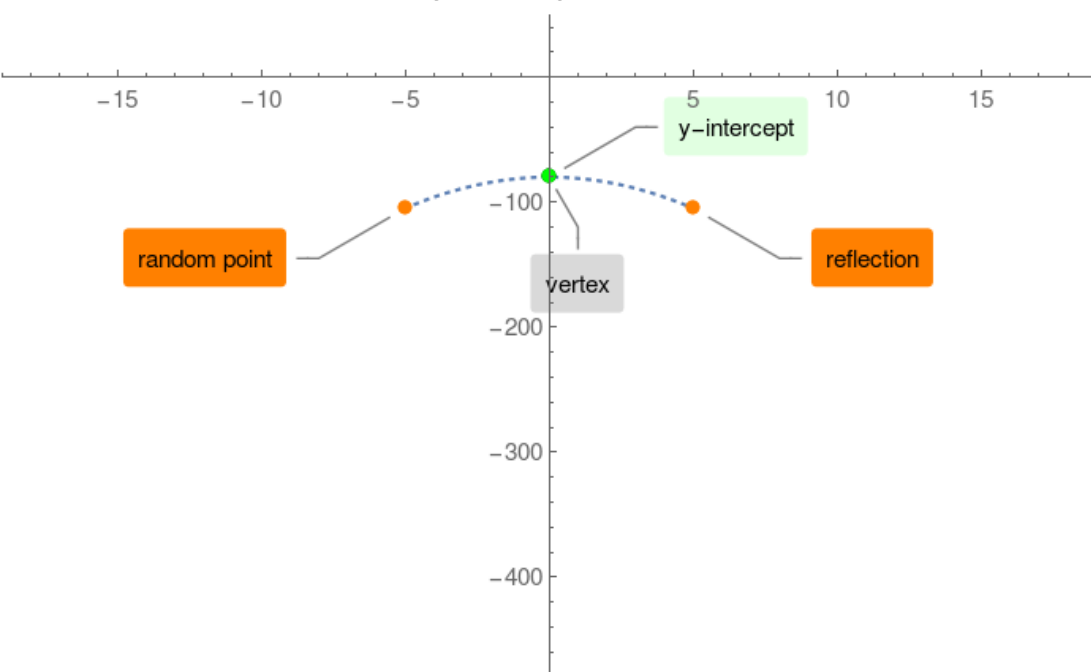

Reflect the point against the vertex's vertical axes:

Reflection = $(5, -105)$

Step 5.

connect the above computed points:

Step 6.

Extend the parabola beyond the range of intercepts
