

# Plotting the Parabola

How to plot :  $p(v) = av^2 + bv + c$

## Step 1.

Examine the sign for the leading coefficient

If  $a > 0$  then the valley shape:

If  $a < 0$  then the hill shape:

## Step 2.

Compute the vertex:  $(-\frac{b}{2a}, p(-\frac{b}{2a}))$

## Step 3.

Compute the p-intercept by setting  $v=0$ ,  $0^2a + 0b + c = c$

## Step 4.

Compute the v-intercepts by solving:  $av^2 + bv + c = 0$

## Step 5.

Sketch a rough plot, try to connect vertex to intercepts:
