

2. Given the graph of function z , which of the following choices is correct?

$z(4) = -18$	domain of $z = [-4, 7]$	$z(0)$ is zero
n -intercept = $(0, 0), (7, 0)$	$z(-3)$ is negative	range of $z = [-18, 0]$
$z(2) = -7$	$z(7) = 0$	z -intercept = $(0, 0)$

range of $z = [-19, -1]$	$z(7) = 0$	$z(4) = -18$
$z(-4) = -6$	domain of $z = [-3, 8]$	$z(0)$ is positive
z -intercept = $(0, 0)$	$z(2)$ is negative	n -intercept = $(0, 0), (7, 0)$

domain of $z = [-4, 7]$	$z(0) = 0$	range of $z = [-18, 0]$
$z(2) = -8$	n -intercept = $(0, 0), (7, 0)$	z -intercept = $(0, 0)$
$z(7)$ is zero	$z(4)$ is negative	$z(-4) = -6$

$z(-4) = -6$	n -intercept = $(0, 0)$	$z(-3)$ is negative
z -intercept = $(0, 1)$	domain of $z = [-4, 7]$	$z(4)$ is negative
$z(2) = -9$	$z(0) = 0$	range of $z = [-18, 0]$

Solution
