

# Plotting the Parabola

How to plot :  $d(j) = aj^2 + bj + c$

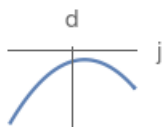

## Step 1.

Examine the sign for the leading coefficient

If  $a > 0$  then the valley shape:

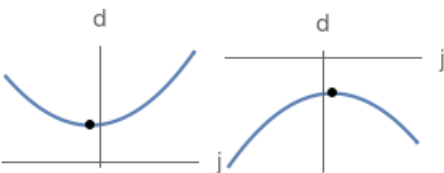

If  $a < 0$  then the hill shape:

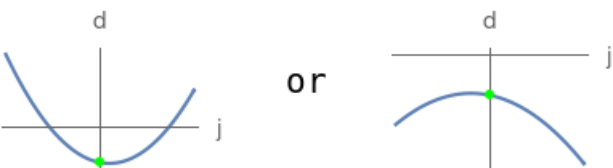

## Step 2.

Compute the vertex:  $(-\frac{b}{2a}, d(-\frac{b}{2a}))$

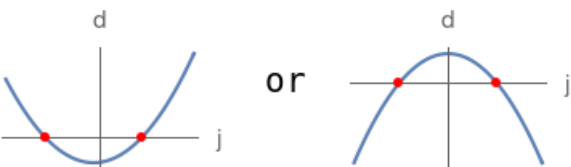

## Step 3.

Compute the d-intercept by setting  $j=0$ ,  $0^2a + 0b + c = c$

## Step 4.

Compute the j-intercepts by solving:  $aj^2 + bj + c = 0$

## Step 5.

Sketch a rough plot, try to connect vertex to intercepts:
