Solution

To find the vertex, we look at the coefficients in the function $\mathsf{j}\left(\mathsf{h}\right) = \mathsf{ah}^2 + \mathsf{bh} + \mathsf{c}$

in this equation, a = 3 and b = 4The first coordinate of the vertex has the formula: $\frac{-b}{2a}$ now, plugging into formula to get:

Therefore, the vertex of the graph of f is $(-\frac{2}{3}, -\frac{25}{3})$

 $\frac{-b}{2a} = -\frac{4}{2(3)} = -\frac{2}{3}$

$$\frac{-\omega}{2a} = -\frac{\tau}{2(3)} = -\frac{\epsilon}{3}$$
The second coordinate of the vertex is $j(-\frac{2}{3}) = 3(-\frac{2}{3})^2 + 4(-\frac{2}{3}) - 7$
