2. Which of the following are correct calculations for difference quotient of: $s(d) = d^2 + 6d + 7$ $s(d) = d^2 + 6d + 7$ $s(d+h) = (d+h)^2 + 6(d+h) + 7$

```
\begin{split} s\left(d\right) &= d^2 + 6 \ d + 7 \\ s\left(d + h\right) &= \left(d + h\right)^2 + 6 \ \left(d + h\right) + 7 \\ &= d^2 + 2 \ d \ h + 6 \ d + h^2 + 6 \ h + 7 \\ &= \frac{s\left(d + h\right) - s\left(d\right)}{h} = \frac{\left(d^2 + 2 \ h \ d + 6 \ d + h^2 + 6 \ h + 7\right) - \left(\left(d + 1\right)^2 + 6 \ \left(d + 1\right) + 7\right)}{h} \\ &= \frac{h^2 + 2 \ d \ h + 6 \ h}{h} \\ &= \frac{h\left(2 \ d + h + 6\right)}{h} \\ &= 2 \ d + h + 6 \end{split}
```

$$\begin{split} s\left(d\right) &= d^2 + 6 \; d + 7 \\ s\left(d + h\right) &= \left(d + h\right)^2 + 6 \; \left(d + h\right) + 7 \\ &= d^2 + 2 \; d \; h + 8 \; d + h^2 + 8 \; h + 14 \\ &\frac{s\left(d + h\right) - s\left(d\right)}{h} &= \frac{\left(d^2 + 2 \; h \; d + 8 \; d + h^2 + 8 \; h + 14\right) - \left(d^2 + 6 \; d + 7\right)}{h} \\ &= \frac{h^2 + 2 \; d \; h + 6 \; h}{h} \\ &= \frac{h \left(2 \; d + h + 6\right)}{h} \\ &= 2 \; d \; + \; h \; + \; 6 \end{split}$$

```
\begin{split} s\left(d\right) &= d^2 + 6 \ d + 7 \\ s\left(d + h\right) &= \left(d + h\right)^2 + 6 \ \left(d + h\right) + 7 \\ &= d^2 + 2 \ d \ h + 6 \ d + h^2 + 6 \ h + 7 \\ \frac{s\left(d + h\right) - s\left(d\right)}{h} &= \frac{\left(d^2 + 2 \ h \ d + 6 \ d + h^2 + 6 \ h + 7\right) - \left(d^2 + 6 \ d + 7\right)}{h} \\ &= \frac{h^2 + 2 \ d \ h + 6 \ h}{h} \\ &= \frac{h\left(2 \ d + h + 6\right)}{h} \\ &= 2 \ d + h + 6 \end{split}
```

```
\begin{split} s &(d) = d^2 + 6 \ d + 7 \\ s &(d+h) = (d+h)^2 + 6 \ (d+h) + 7 \\ = d^2 + 2 \ d \ h + 4 \ d + h^2 + 4 \ h + 2 \\ \frac{s &(d+h) - s &(d)}{h} = \frac{\left(d^2 + 2 \ h \ d + 10 \ d + h^2 + 10 \ h + 23\right) - \left(d^2 + 6 \ d + 7\right)}{h} \\ = \frac{h^2 + 2 \ d \ h + 6 \ h}{h} \\ = \frac{h &(2 & (d+1) + h + 6)}{h} \\ = 2 & d + h + 6 \end{split}
```

Solution
