## The domain is all values that i is allowed to be. Since I can't divide by zero (division by zero isn't allowed, I need to find all values of i that would cause division by zero.

 $2i^{4} + 4 = 0$ 

The domain will then be all other i-values. When is this denominator equal to zero?

impossible , then the domain of r is  $(-\infty,\infty)$  i.e.  $\mathbf{i} \in \mathbb{R}$
