The domain is all values that n is allowed to be. Since I can't divide by zero (division by zero isn't allowed, I need to find all values of n that would cause division by zero.

 $5~n^4+25=0$  impossible , then the domain of a is  $(-\infty,\infty)$  i.e.  $n\in\mathbb{R}$ 

The domain will then be all other n-values. When is this denominator equal to zero?
