Solution To find the vertex, we look at the coefficients in the function  $x(y) = ay^2 + by + c$ 

in this equation, a=2 and b=3The first coordinate of the vertex has the formula:  $\frac{-b}{2a}$  now, plugging into formula to get:

$$\frac{-b}{2 \ a} = - \ \frac{3}{2 \ (2)} = - \ \frac{3}{4}$$

The second coordinate of the vertex is  $x(-\frac{3}{4}) = 2(-\frac{3}{4})^2 + 3(-\frac{3}{4}) - 3$ 

cond coordinate of the vertex is 
$$x(-\frac{3}{4}) = 2(-\frac{3}{4})^2 + 3(-\frac{3}{4})^2 + 3(-\frac{3}{4})^2$$

Therefore, the vertex of the graph of f is  $(-\frac{3}{4}, -\frac{33}{8})$ 

$$(-\frac{3}{4})^2 + 3(-\frac{3}{4}) - 3$$

$$\frac{3}{4}$$
)  $^2 + 3$  (  $-\frac{3}{4}$  )  $-3$ 

$$+3(-\frac{3}{4})-3$$
