2.

2. Perimeter of rectangle = 2(d+a)=221 where a is the length of the other edge of rectangle. Area of the rectangle is = $d \times a$. Use perimeter equation

Then reformulate the area $D=d\times a=\frac{221\,d}{2}-d^2$ which turns out to be a quadratic Parabola:

and solve for $a = \frac{221-2d}{2}$

Compute the vertex $\frac{221}{4}$ and then plug the vertex into the area which will compute the maximum area.
