$$(v-4) (v-2) (v+3)$$
 $(v+2) (v+3)^2$
 $(v-4) (v-1) (v+3)$
 $(v-2) (v+3) (v+4)$

3. $v^3 - 2v^2 - 11v + 12$ has a factor (v - (-3)) compute all other factors:

Solution

Apply Long Division.

(V - 4) (V - 1) (V + 3)
